

Q. How many tokens would typically be produced from the sentence "Don't tell me!"

Answer: 5 tokens

Q. Rewrite code for following list comprehension using nested loops: `matrix = [[0 for i in range(m + 1)] for i in range(n + 1)]`

```
matrix = []
```

```
for row in range(n+1):
```

```
    tmp = []
```

```
    for col in range(m+1):
```

```
        tmp.append(0)
```

```
    matrix.append(tmp)
```

What is the value of `matrix[row_index][col_index]` at point 3 when `row_index` is 1 and `col_index` is 1 for the function call `evenshtein("cat", "bats")`` ?

Answer: 2

What is the value of `matrix[row_index][col_index]` at point 3
when `row_index` is 2 and `col_index` is 2 for the function
call `levenshtein("cat", "bats")`` ?

Answer: 2

What is the value of `matrix[row_index][col_index]` at point 3
when `row_index` is 3 and `col_index` is 4 for the function call `levenshtein("cat",
"bats")`` ?

Answer: 3
